5. Any questions concerning these specifications should be clarified prior to commencing the job. Any changes to these specifications would require written approval of the owner, agent, or Sherwin-Williams representative.

I. Surface Preparation

1. Each surface shall be cleaned, scraped, sanded and prepared as specified. The painting contractor is responsible for the finish of his work. Should any surface be found unsuitable to produce a proper paint or sealant finish, the project representative shall be notified, in writing, and no materials shall be applied until the unsuitable surfaces have been made satisfactory. Commencing of work in a specific area shall be construed as acceptance of surfaces and thereafter as fit and proper to receive finish. Contractor shall be fully responsible for satisfactory work.

2. All deteriorated or delaminated substrates (i.e. wood, hardboard siding, T-111, stucco and masonry surfaces) shall be replaced with new materials. New substrates will be box primed (6 sides) before installation in accordance with specifications. Delaminating substrate is defined as a substrate surface that paint is being applied to lifting or peeling away from the previous coating/s or original substrate/s.

3. All exterior surfaces to be painted shall be pressure cleaned, scraped to remove all dirt, mildew, peeling paint, chalk and any foreign materials detrimental to the new finish (see Pressure Washing).

4. Thoroughly sand all glossy surfaces to create a profile for paint and/or primer to adhere to.

5. Apply caulks and sealants where appropriate. All existing underperforming caulks or sealants should be removed and replaced with sealant as specified. Allow sealant to cure for specified time in dry weather before paint is applied. **NOTE**: It is recommended to apply all primers first and then apply sealant before topcoat is applied. See specified sealants section.

6. Knots and pitch streaks shall be scraped, sanded and spot primed before full priming coat is applied. All nail holes or small openings shall be patched after priming coat is applied. Any wood that is rotten, cracked, delaminated or water damaged should be replaced. Any loose or peeling paint should be removed by sanding and scraping. All hard, glossy surfaces should be sanded down to create a profile for new paint to adhere. Fill nail holes, imperfections and cracks with putty (color to match primer). Edges, corners and raised grain shall be prepared by sanding. Apply sealants to all joints between wood items with a specified sealant.

7. All masonry surfaces should be scrapped and cleaned to remove all peeling paint, delaminated surfaces or substrates, chalk, dirt, stains, efflorescence and other surface contaminants. These areas shall be pressure washed and scrubbed with a cleaner/degreaser solution. After cleaning if there is still chalk evident this should be brought to the owner's attention in writing before any further work is done. Use an industry accepted patch or filler to assure a visually aesthetic finished substrate. Any masonry surface should be toughly tested to assure the surface pH levels are within accepted range of coating/s to be applied.

8. Brick must be free of dirt, loose and/or peeling paint, loose and excess mortar, delaminating layers of the brick, and foreign material. All brick should be allowed to weather for at least one year followed by wire brushing to remove efflorescence. Treat the bare brick with one coat of Loxon Conditioner. Any areas of breakage shall by patched and dried using specified Sherwin-Williams patching compound in accordance with Product Data Sheet instructions before coatings are applied.

9. All galvanized gutters and flashing should be thoroughly cleaned and sanded to remove loose and peeling paint. Any bare galvanized metal should be wiped down with a non-petroleum solvent cleaner.

10. All ferrous metals should be thoroughly cleaned and all loose rust or mill scale be removed by wire brush, scraper and/or power tool, such as an electric drill with wire brush attachment. Any rust spots or bare metal should receive the specified prime coat. Any hard, glossy surfaces should be sanded or dulled. Previously painted hand rails in sound condition should be washed down with a strong degreasing cleaner such as Krud-Kutter, M-1 House Wash or Simple Green.

11. All vinyl siding should be clean thoroughly by scrubbing with a warm, soapy water solution. Rinse thoroughly. Do not paint vinyl siding with any color darker than the original color, unless the product and color are designed for such use. Painting with darker colors may cause siding to warp.

12. Cement Composition Siding/Panel/Fiber Cement Siding: Remove all surface contamination by washing with an appropriate cleaner, rinse thoroughly and allow to dry. Existing peeled or checked paint should be scraped and sanded to a sound surface. Pressure clean, if needed, to remove all dirt, dust, grease, oil, loose particles, laitance, foreign material, and peeling or defective coatings. Allow the surface to dry thoroughly. The pH of the surface should be 7 or less, unless the products are designed to be applied to high pH substrates.

13. EIFS: Remove all surface contamination by washing with an appropriate cleaner, rinse thoroughly and allow to dry. Remove and replace any peeling or delaminating surfaces. Replace EIFS to manufactures recommendation.

J. Moisture

All areas that could cause paint failure due to moisture should be addressed and eliminated. This would include but is not limited to:

1. Gutters and downspouts not working properly.
2. Previous coats of paint not adhering properly.
3. Wood checking (cracks and splits in wood).

4. Deteriorated caulking or sealant.
5. Gaps between substrates.
6. Rotten wood.
7. Areas affected by water splashing.
8. Painting in inclement weather.
9. Painting a wet substrate.
10. Uncaulked nail holes.

K. Pressure Washing & Surface Preparation

1. Pressure wash or water blast to remove oil, grease, dirt, loose mill scale and loose paint by water at pressures of 2500-3000 psi. Power tool clean per SSPC-SP3 to remove loose rust and mill scale. Hand tool clean per SSPC-SP2 and sand all glossy surfaces to promote adhesion.

2. Remove mildew per the following:
    a. Tools: Stiff brush, garden pump sprayer or chemical injector power washer method.
    b. Remove before painting by washing with a solution of 1-part liquid bleach and 3 parts water. Apply the solution and scrub the mildewed area. Allow the solution to remain on the surface for 10 minutes. Rinse thoroughly with water and allow the surface to dry before painting. Wear protective eyewear, waterproof gloves, and protective clothing. Quickly wash off any of the mixture that comes in contact with your skin. Do not add detergents or ammonia to the bleach/water solution.

L. Application

1. Contractor shall be responsible for notification of owner's representative before beginning work if conditions substantially exceed Scope of Work.

2. Contractor shall protect his/her work at all times and shall protect all adjacent work and materials by suitable covering or other method during progress of the work. Upon completion of work, he/she shall remove all paint and varnish spots from floors, glass and other surfaces. He shall remove from premises all rubbish and accumulated materials of whatever nature not caused by others and shall leave his part of work in a clean, orderly, and acceptable condition.

3. Remove and protect hardware, accessories, device plates, lighting fixtures, factory finished work and similar items or provide ample in-place protection. Upon completion of each space, carefully replace all removed items.

4. Cover all electrical panel box covers and doors before painting walls. Omit if covers have been previously painted.

5. Materials shall be applied under adequate illumination, evenly spread and flowed on smoothly to avoid runs, sags, holidays, brush marks, air bubbles and excessive roller stipple. The finished paint film should be a consistent color and sheen to provide a uniform appearance.

6. All coats shall be dry to manufacturer's instructions before applying additional coats.

7. Any masonry surface with an elevated pH level or "hot spots" shall be sealed with a suitable primer/sealer prior to application of finish coat. High pH is considered at a level of 7 pH or greater.

8. When spray painting is specified, contractor shall finish 100 square feet by spraying a sample of finish upon request of owner. This shall be finished with materials specified and shall be called a Pilot Wall.

9. Exterior doors with paintable tops, bottoms, and side edges should be painted or sealed using the Door Manufacturer's paint specification and recommendations.

10. Building by building inspections will be made by the owner or his representative. If requested, a Sherwin-Williams representative may participate in these visits for technical consultation.

11. All repairs, replacements and applications are to meet or exceed all manufacturers' and attached specifications.

12. Elastomeric coatings shall not be applied directly over pre-existing elastomeric coatings.

13. Coverage and hide shall be complete. When color, stain, dirt, or undercoats show through final coat of paint, surface shall be covered by additional coats until paint film is of uniform finish, color, appearance and coverage (regardless of the number of coats specified).

M. Workmanship & Application Conditions

1. Keep surface dust, dirt and debris free before, during, and after painting, until paint is cured.

2. Execute work in accordance with label directions. Coating application shall be made in conformance to this specification and to the manufacturer's paint instruction on the labels and Product Data Sheets.

3. All work shall be accomplished by persons with the necessary skill and expertise and qualified to do the work in a competent and professional manner.

4. All shrubbery, outside carpeting and sprinkler systems shall be fully protected against damage during each stage of the painting project.

5. Paint all previously painted surfaces, including, but not limited to: stair systems, light poles and fixtures, pool fence, and underside of balconies. Any potentially hazardous substrate shall be reviewed with owner and owner's agent. All necessary safety precautions must be fully taken to ensure worker's safety.

6. All exterior substrates designated not to receive paint coatings shall be kept free of paint residue, i.e., windows, outdoor carpeting, walkways, etc.

7. Owner shall provide water and electricity from existing facilities.

8. Normal safety and "wet paint" signs, necessary lighting and temporary roping off around work areas shall be installed and maintained in accordance with OSHA requirements while the work is in progress.

9. A progress schedule shall be furnished by the contractor to the owner for approval and shall be based on the contract completion date. Contractor shall advise the owner of those areas in which work is to be performed sufficiently in advance of the work schedule to permit the owner to prepare for the work, advise residents, move vehicles, etc.

10. Do not paint over any code required labels or any equipment identification, performance rating, name or nomenclature plates.

11. Coverage and hide shall be complete. When color, stain, dirt, or undercoats show through final coat of paint, surface shall be covered by additional coats until paint film is of uniform finish, color, appearance and coverage (regardless of the number of coats specified).

N. Weather

1. All materials are to be applied in accordance with the product data page in regards to weather conditions. Stop exterior work early enough in the day to permit paint film to set up before condensation caused by night temperature drops occurs.

2. Do not begin painting until surfaces are moisture free.

O. Color Schedule

1. To be approved by owners.

2. The owner and project coordinator should be aware that certain colors, especially darker tones, fade more rapidly than other colors, regardless of the product manufacturer, product type, or substrate to which the product is applied. It is advisable for the owner, project coordinator, and/or person responsible for color selection to consult with Sherwin-Williams early in the planning stage to assure the most durable combination of tinting formulation is used to achieve the desired color. Additionally, color selection affects the hiding ability of the finish coats.

P. Coating Maintenance Manual

1. Upon conclusion of the project, the Contractor or paint manufacture/supplier shall furnish a coating maintenance manual, such as Sherwin-Williams "Custodian Project Color and Product Information" report or equal. Manual shall include an Area Summary with finish schedule, Area Detail designating where each product/color/finish was used, product data pages, Material Safety Data Sheets, care and cleaning instructions, touch-up procedures, and color samples of each color and finish used.

Recommended Coatings Systems

Thank you for the submittal of Sherwin-Williams products on the above referenced project. The Sherwin-Williams Company certifies that the products we intend to furnish will meet or exceed the performance requirements of the job specifications.

Surface preparation, application methods, spreading rates, and wet and dry film thicknesses will be determined by the attached specifications and our Material Safety Data Sheets, available at www.sherwin-williams.com, except as noted below.

All surface contamination, such as mildew, chalk, grease, dirt, grime, rust, efflorescence, old loose peeling paint, rotten wood and hard glossy surfaces, needs to be removed by pressure washing, prep work and hand tool clean, before a new coating system can be applied. Be sure to read and follow the Data Sheets before application.

Minimum Recommended Surface Preparation

SSPC-SP1: Remove all oil, grease, chalk and other surface contamination through use solvent cleaning.
SSPC-SP2: Remove all peeling paint, mill scale, loose rust, foreign material through use of hand tools.
SSPC-SP3: Remove all peeling paint, loose mill scale, rust and foreign material through use of power tool cleaning.

Surface Cleaner: Simple Green Wash Cleaner or equivalent non-residue surface cleaner
Sealant: Concrete and Masonry Elastomeric Patching Material, Loxon S1, Loxon H1 Sealants

Caulks and Sealants

Execution

A. Do not begin application of caulk or sealants until substrates have been properly prepared. Notify Architect of unsatisfactory conditions before proceeding.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

C. Proceed with work only after conditions have been corrected, and approved by all parties, otherwise application of caulks and sealants will be considered as an acceptance of surface conditions.

Surface Preparation

A. Clean all joints by removing any foreign matter or contaminants that would impede adhesion of the sealant to the building material. The surface must be dry and in sound condition. Remove oil, dust, dirt, loose rust, peeling paint or other contamination to ensure good adhesion.

B. Porous materials are usually treated by mechanical means and nonporous surfaces by a solvent wipe that is compatible with the building substrate being used. N**ote:** For porous surfaces, the use of detergent or soap & water is NOT recommended.

C. Existing sealants intended to be painted should be tested to assure coatings will fully adhere. Silicone sealants cannot be painted unless tested and approved by Sherwin-Williams and Owner.

D. Priming: When required, apply a primer. Do NOT allow it to pool or puddle.

E. Install backup materials as required to ensure that the recommended depth is regulated when using the backup material.

F. No exterior caulking should be done immediately after a rain, during foggy weather, when rain is predicted, or when the temperature is below 50°F, unless products are designed specifically for these conditions.

Installation

A. Apply all caulks and sealants with manufacturer specifications in mind.

B. Do not apply to wet or damp surfaces.

1. Wait at least 30 days before applying to new concrete or masonry, or follow manufacturer's procedures to apply appropriate sealants prior to 30 days.
2. Wait until wood is fully dry after rain or morning fog or dew.

C. Apply sealants using methods recommended by manufacturer.

D. Uniformly apply caulks and sealants without skips, voids or sags. Tool bead to a consistent, smooth surface.

Stucco Masonry Surfaces (Crack Repair)

Crack Repair

Identify all cracks in the existing substrates and repair per manufacturer's recommendation.

A. For hairline cracks 1/16 inch or less wide — seal with Sherwin-Williams Concrete and Masonry Elastomeric Patching Compound (smooth or textured).

B. For cracks 1/16-3/5 inch, route the crack open to a uniform size by mechanical methods. Clean out crack with water and allow to completely dry. Seal with Sherwin-Williams Concrete and Masonry Elastomeric Patching Compound (smooth or textured).

C. For cracks deeper than ½ inch or wider than 1/4inch, backer rods should be used to fill the gap and to eliminate three-point adhesions. See data sheet for additional information.

1. ALL WORK SHALL COMPLY WITH CODES AND LOCAL ORDINANCES. SEE "REFERENCE CODES" ON SHEET G000.
2. CONTRACTOR SHALL VERIFY ALL LEVELS, DIMENSIONS AND EXISTING CONDITIONS OF THE JOB BEFORE PROCEEDING AND SHALL REPORT ANY DISCREPANCIES TO THE ARCHITECT. IN CASES OF DISCREPANCIES BETWEEN EXISTING CONDITIONS AND THE DRAWINGS, THE CONTRATOR SHALL OBTAIN WRITTEN DIRECTIONS FROM THE ARCHITECT PRIOR TO PROCEEDING. DIMENSIONS NOTED AS PLUS OR MINUS (±) INDICATE UNVERIFIED DISTANCE TO EXISTING REFERENCE AND ARE APPROXIMATE. NOTIFY ARCHITECT IMMEDIATELY OF CONFLICTS OR VARIATION FROM INDICATED DIMENSION.
3. NOTED DIMENSIONS TAKE PRECEDENCE OVER SCALED DIMENSIONS. DO NOT SCALE DRAWINGS.
4. REPETITIVE FEATURES DRAWN OR NOTED ONLY ONCE SHALL BE COMPLETELY PROVIDED AS IF DRAWN OR NOTED IN FULL.

NOTES:

SCOPE

- The site contains (14) 3-story existing wood buildings constructed in 1968. There are two building types: (9) 12-unit buildings and (5) 18-unit buildings. Each unit has a balcony or patio of approximately 60 SF.
- The project scope includes demolition of all existing balconies, patios, and exterior lap siding, and construction of new balconies, patios, and new siding over new exterior insulation rain-screen system.
- Seismic upgrades will voluntarily be applied to balconies and possibly voluntarily applied to the buildings. These seismic upgrades will result in design changes to the balconies.
- Existing mansard roof parapets above the balconies will be re-shingled.
- Each 12-unit building has approximately 720 SF of balconies and patios that will be replaced, and each 18-unit building has approximately 1,080 SF of balconies and patios that will be replaced.

PERMITTING QUESTIONS

ITEM	DISCUSSION
1	Please confirm whether we can submit permits for all 14 buildings at once. Construction is expected to be phased over 7 years (2 buildings per year), and each building will have its own permit. This will allow all permits to fall under the same code. • SC: Each building will have its own permit. Bellevue will not vest a future project under a current code. • Building permits are good for three years from the date of issuance. Work must start within one year of the permit being issued or it can expire. If the three-year life of the permit has expired, approval from the building official will be required for an extension. Otherwise, a new permit must be obtained.
2	Based on the definitions in the 2018 Bellevue Existing Building Code, we do not believe this project qualifies as a Substantial Improvement (the cost of construction will not exceed 50% of the market value of the structure before the improvement is started) or a Substantial Structural Alteration (the structural elements altered do not support more than 30% of the total floor and roof area). We plan to prescriptively demonstrate that the alterations being made comply with current applicable codes. Please confirm whether this is acceptable. • SC: Confirmed
3	Please confirm which 'Activity Type' applies to this scope of work. We think it could be 'Structure Addition – less than 1,000 SF' for the 12-unit buildings and 'Structure Addition – 1,000 SF to 3,999 SF for the 18-unit buildings. • SC: BW permit is for projects less than 1000 SF. • SC: BM permit is for projects 1000 SF and up. • Both of those assumptions are accurate.
4	Please confirm the general requirements for permit submittal and whether a survey is required. We plan to submit a site plan, elevations of the buildings, and plans, elevations, sections, and details for the balconies and mansard roof parapets. • SC: No survey is required. • SC: Building interiors do not need to be shown on permit plans; only the exterior wall in relation to the decks.
5	Please confirm if there are any other scopes of work required by Bellevue City Code (seismic upgrades, energy upgrades, etc.). • SC: Reference the energy code for existing building requirements.
6	Please confirm the expected review time. • SC: Expect a review time of 18 weeks for both permit types. • Reference this website for updated permit review times: https://bellevuewaprod.blob.core.windows.net/documentcenter/DSRecords/processing-day-by-permit-type.pdf
7	Miscellaneous • Project team will confirm that the project complies with RCW 64.65. KCHA sign Condo Sale Prohibition Covenant. 1 • CoB will adopt the 2021 Building Code when the State adopts it. This is expected to happen on 7/1/23. • At the time of permit submittal, SMR will ask which reviewer is assigned to the project. SMR will send these minutes to that person.

These minutes reflect our understanding of the items discussed during the meeting. Please notify Dee Knoff immediately if revisions are required. Concurrence with the minutes as published will otherwise be understood.

Hi Kim-

I reviewed this with our Building review supervisors and determined that proposed design revision meets the intent of IEBC 503.1. The balcony floors may be re-constructed as non-rated with condition that they are not less complying than the existing balcony construction prior to the alteration.

Let me know if you need additional clarification.

Best,
Julius

Hi Julius,

Please see attached the proposed sketch regarding the balconies.

IEBC 503.1 Except as provided by section 302.4, 302.5 or this sections, Alteration to any building or structure shall comply with the requirements of the IBC for new construction. Alterations shall be such that the existing building or structure is not less complying with the provisions of the IBC than the existing building or structure was prior to the alteration.

- Existing balconies do not appear to be rated. See diagram and photo attached.
- Existing balconies used wood columns and lack shear supports. See diagram and photo attached.
- The proposed alteration is not rated. It is not less complying with the provisions of the IBC than the existing building or structure prior to the alteration. In addition, the proposed alteration is providing steel beams and columns for shear supports at the balconies, which is an improvement. See sketch attached.
- Complies with IEBC 503.1

CC-ing Victor, our Structural Engineer in this email as well.

Best,
Kim

Kim,

Please send us a sketch of your proposed redesign regarding the balconies below so we can do a quick review. As discussed, IBC 705.2.3.1 requires balconies of combustible construction to be fire resistance rated by Table 601 unless one of the listed exceptions is met. Since the building is non-sprinklered, this would still require 1-hr rating for the balcony (type VA construction, non-sprinklered). You mentioned that the existing balconies are not rated and so the proposed alteration (if not rated) shall be such that it must be not less complying than the original condition (IEBC 503.1).

Hope this helps.

Julius

Hi Julius,

Circle back on our conversation regarding the balconies at Cascadian Apartments.

- We discussed with our Structural Engineer and the Owner's team about redesigning the balconies to have no exterior walls. As you mentioned, this allows for the balconies to be considered as Projections per IBC 705.2.2 -Projections, therefore do not required to be fire rated for 1-hr.
- The Owner team elected to go ahead with the redesign. All balconies will have steel columns and beams similar to a few small ones at Building P. We will aim to replace the corner 6x6's with HSS

4x4's and replace the shear wall with one more 4x4 (3 column frame). We will eliminate the privacy walls between unit balconies and propose a privacy screen product as you have recommended.

I want to check in with you and give you a heads up on our direction before we resubmit the Building Permit's responses. Please let us know if you have any questions.

I'll follow up with a phone call.

Best,
Kim

Hi Julius,
We are working with our consultants on items below, but we have an additional question regarding fire rating the columns.

At Building P, we have some small balconies that are supported by steel HSS tubes. My question is whether exterior steel columns would require protection?

I'll follow up with a call and discuss.

Best,
Kim

THE EXISTING WALL SHEATHING ON THE BUILDING CONSISTS OF ½" GYPSUM SHEATHING EVERYWHERE. AS PART OF THE SIDING REPLACEMENT PROJECT, THE EXTERIOR GYPSUM SHEATHING WILL BE REPLACED WITH NEW CDX SHEATHING (BRACED WALL PANEL) IN THE AREAS NOTED ON THE PLAN. NEW PRESCRIPTIVE POSITIVE CONNECTIONS (HOLDOWNS) WILL BE PROVIDED AT THE ENDS OF EACH NEW BRACED WALL SECTION. THIS WORK IS THE ONLY SCOPE OF A VOLUNTARY SEISMIC UPGRADE PER EBC 3403.3. ALL WALL SHEATHING UPGRADE WORK WILL OCCUR FROM THE EXTERIOR ONLY. NO NEW DIAPHRAGM SHEATHING, COLLECTORS, CHORDS OR CONNECTIONS ARE PROPOSED. THE WALL SHEATHING & HOLDOWN UPGRADE WORK IS VOLUNTARY AND PRESCRIPTIVE IN NATURE AND NOT DESIGNED TO MEET CURRENT SEISMIC CODE REQUIREMENTS.

3. STRUCTURAL DRAWINGS SHALL BE USED IN CONJUNCTION WITH ARCHITECTURAL AND ALL OTHER DISCIPLINES' DRAWINGS FOR BIDDING AND CONSTRUCTION. CONTRACTOR SHALL VERIFY DIMENSIONS AND CONDITIONS FOR COMPATIBILITY AND SHALL NOTIFY ARCHITECT OF ANY DISCREPANCIES PRIOR TO CONSTRUCTION.

   DISCREPANCIES: THE CONTRACTOR SHALL INFORM THE ENGINEER IN WRITING, DURING THE BIDDING PERIOD, OF ANY DISCREPANCIES OR OMISSIONS NOTED ON THE DRAWINGS OR IN THE SPECIFICATIONS OR OF ANY VARIATIONS NEEDED IN ORDER TO CONFORM TO CODES, RULES AND REGULATIONS. UPON RECEIPT OF SUCH INFORMATION, THE ENGINEER WILL SEND WRITTEN INSTRUCTIONS TO ALL CONCERNED. ANY SUCH DISCREPANCY, OMISSION, OR VARIATION NOT REPORTED SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR, AND WORK SHALL BE PERFORMED IN A MANNER AS DIRECTED BY THE ENGINEER.

(7) BASED ON Ø.131 X 1-1/2" LONG NAILS USED TO ATTACH FRAMING CLIPS DIRECTLY TO FRAMING. USE Ø.131 X 2-1/2" NAILS WHERE INSTALLED OVER SHEATHING
(8) FRAMING CLIPS: A35 OR LTP5 OR APPROVED EQUIVALENT
(9) WHERE PLATE ATTACHMENT SPECIFIES (2) ROWS OF NAILS, PROVIDE DOUBLE JOIST, RIM OR EQUAL. ATTACH PER DETAILS.
(10) ANCHOR BOLTS SHALL BE PROVIDED WITH STEEL PLATE WASHERS 1/4"X3"X3". USE SHORT SLOTTED WASHERS AT 2x6 (OR LARGER) WALLS AND EXTEND WASHER TO WITHIN ½" OF FACE OF WALL SHEATHING. STAGGER ANCHOR BOLT WASHERS AT WALLS WITH SHEATHING AT BOTH FACES. EMBED ANCHOR BOLTS 1" MINIMUM INTO THE CONCRETE.
(11) PRESSURE TREATED MATERIAL CAN CAUSE EXCESSIVE CORROSION IN THE FASTENERS. PROVIDE HOT-DIPPED GALVANIZED (ELECTRO-PLATING IS NOT ACCEPTABLE) NAILS AND CONNECTOR PLATES (FRAMING ANGLES, ETC.) FOR ALL CONNECTORS IN CONTACT WITH PRESSURE TREATED FRAMING MEMBERS
(12) 7/16" APA RATED SHEATHING (OSB) MAY BE USED IN PLACE OF 15/32" SHEATHING PROVIDED THAT ALL STUDS ARE SPACED AT 16" O.C.
(14) AT ADJOINING PANEL EDGES, (2) 2X STUDS NAILED TOGETHER MAY BE USED IN PLACE OF A SINGLE 3X STUD. DOUBLE 2X STUDS MAY BE CONNECTED TOGETHER BY NAILING THE STUDS TOGETHER WITH 3" LONG NAILS OF THE SAME SPACING AND DIAMETER AS THE PLATE NAILING.
(15) CONTACT THE ENGINEER OF RECORD FOR ADHESIVE OR EXPANSION BOLT ALTERNATIVES TO CAST-IN-PLACE ANCHOR BOLTS. (SPECIAL INSPECTION MAY BE REQUIRED)
(16) MINIMUM NAIL LENGTH IS BASED ON REQUIRED PENETRATION INTO FRAMING MEMBER OF 1½"

NOTES:

SCOPE

- The site contains (14) 3-story existing wood buildings constructed in 1968. There are two building types: (9) 12-unit buildings and (5) 18-unit buildings. Each unit has a balcony or patio of approximately 60 SF.
- The project scope includes demolition of all existing balconies, patios, and exterior lap siding, and construction of new balconies, patios, and new siding over new exterior insulation rain-screen system.
- Seismic upgrades will voluntarily be applied to balconies and possibly voluntarily applied to the buildings. These seismic upgrades will result in design changes to the balconies.
- Existing mansard roof parapets above the balconies will be re-shingled.
- Each 12-unit building has approximately 720 SF of balconies and patios that will be replaced, and each 18-unit building has approximately 1,080 SF of balconies and patios that will be replaced.

PERMITTING QUESTIONS

ITEM	DISCUSSION
1	Please confirm whether we can submit permits for all 14 buildings at once. Construction is expected to be phased over 7 years (2 buildings per year), and each building will have its own permit. This will allow all permits to fall under the same code. • SC: Each building will have its own permit. Bellevue will not vest a future project under a current code. • Building permits are good for three years from the date of issuance. Work must start within one year of the permit being issued or it can expire. If the three-year life of the permit has expired, approval from the building official will be required for an extension. Otherwise, a new permit must be obtained.
2	Based on the definitions in the 2018 Bellevue Existing Building Code, we do not believe this project qualifies as a Substantial Improvement (the cost of construction will not exceed 50% of the market value of the structure before the improvement is started) or a Substantial Structural Alteration (the structural elements altered do not support more than 30% of the total floor and roof area). We plan to prescriptively demonstrate that the alterations being made comply with current applicable codes. Please confirm whether this is acceptable. • SC: Confirmed
3	Please confirm which 'Activity Type' applies to this scope of work. We think it could be 'Structure Addition – less than 1,000 SF' for the 12-unit buildings and 'Structure Addition – 1,000 SF to 3,999 SF for the 18-unit buildings. • SC: BW permit is for projects less than 1000 SF. • SC: BM permit is for projects 1000 SF and up. • Both of those assumptions are accurate.
4	Please confirm the general requirements for permit submittal and whether a survey is required. We plan to submit a site plan, elevations of the buildings, and plans, elevations, sections, and details for the balconies and mansard roof parapets. • SC: No survey is required. • SC: Building interiors do not need to be shown on permit plans; only the exterior wall in relation to the decks.
5	Please confirm if there are any other scopes of work required by Bellevue City Code (seismic upgrades, energy upgrades, etc.). • SC: Reference the energy code for existing building requirements.
6	Please confirm the expected review time. • SC: Expect a review time of 18 weeks for both permit types. • Reference this website for updated permit review times: https://bellevuewaprod.blob.core.windows.net/documentcenter/DSRecords/processing-day-by-permit-type.pdf
7	Miscellaneous • Project team will confirm that the project complies with RCW 64.65. KCHA sign Condo Sale Prohibition Covenant. 1 • CoB will adopt the 2021 Building Code when the State adopts it. This is expected to happen on 7/1/23. • At the time of permit submittal, SMR will ask which reviewer is assigned to the project. SMR will send these minutes to that person.

These minutes reflect our understanding of the items discussed during the meeting. Please notify Dee Knoff immediately if revisions are required. Concurrence with the minutes as published will otherwise be understood.

Hi Kim-

I reviewed this with our Building review supervisors and determined that proposed design revision meets the intent of IEBC 503.1. The balcony floors may be re-constructed as non-rated with condition that they are not less complying than the existing balcony construction prior to the alteration.

Let me know if you need additional clarification.

Best,
Julius

Hi Julius,

Please see attached the proposed sketch regarding the balconies.

IEBC 503.1 Except as provided by section 302.4, 302.5 or this sections, Alteration to any building or structure shall comply with the requirements of the IBC for new construction. Alterations shall be such that the existing building or structure is not less complying with the provisions of the IBC than the existing building or structure was prior to the alteration.

- Existing balconies do not appear to be rated. See diagram and photo attached.
- Existing balconies used wood columns and lack shear supports. See diagram and photo attached.
- The proposed alteration is not rated. It is not less complying with the provisions of the IBC than the existing building or structure prior to the alteration. In addition, the proposed alteration is providing steel beams and columns for shear supports at the balconies, which is an improvement. See sketch attached.
- Complies with IEBC 503.1

CC-ing Victor, our Structural Engineer in this email as well.

Best,
Kim

Kim,

Please send us a sketch of your proposed redesign regarding the balconies below so we can do a quick review. As discussed, IBC 705.2.3.1 requires balconies of combustible construction to be fire resistance rated by Table 601 unless one of the listed exceptions is met. Since the building is non-sprinklered, this would still require 1-hr rating for the balcony (type VA construction, non-sprinklered). You mentioned that the existing balconies are not rated and so the proposed alteration (if not rated) shall be such that it must be not less complying than the original condition (IEBC 503.1).

Hope this helps.

Julius

Hi Julius,

Circle back on our conversation regarding the balconies at Cascadian Apartments.

- We discussed with our Structural Engineer and the Owner's team about redesigning the balconies to have no exterior walls. As you mentioned, this allows for the balconies to be considered as Projections per IBC 705.2.2 -Projections, therefore do not required to be fire rated for 1-hr.
- The Owner team elected to go ahead with the redesign. All balconies will have steel columns and beams similar to a few small ones at Building P. We will aim to replace the corner 6x6's with HSS 4x4's and replace the shear wall with one more 4x4 (3 column frame). We will eliminate the privacy walls between unit balconies and propose a privacy screen product as you have recommended.

I want to check in with you and give you a heads up on our direction before we resubmit the Building Permit's responses. Please let us know if you have any questions.

I'll follow up with a phone call.

Best,
Kim

Hi Julius,
We are working with our consultants on items below, but we have an additional question regarding fire rating the columns.

At Building P, we have some small balconies that are supported by steel HSS tubes. My question is whether exterior steel columns would require protection?

I'll follow up with a call and discuss.

Best,
Kim

DEMOLITION PLAN NOTES

1. THESE DRAWINGS ARE BASED ON INFORMATION AMD DRAWINGS PROVIDED BY OTHERS AND/OR LIMITED SITE OBSERVATIONS AND GENERALLY REPRESENT EXISTING CONDITIONS. ALL REPRESENTATIONS AND DIMENSIONS ARE APPROXIMATE AND ARE SUBJECT TO FURTHER FIELD VERIFICATION. EXISTING WALL CONSTRUCTION IS ASSUMED AND MUST BE VERIFIED IN FIELD.
2. ALL LOCATIONS OF REMOVED OR DEMOLISH ITEMS AND SITE COMPONENTS AND SYSTEMS WHERE ADJACENT SURFACES ARE TO REMAIN, PATCH AND REPAIR AFFECTED AREA(S) REQUIRING PATCHING AND REPAIRING. PROVIDE FINISH MATERIALS, COLORS AND TEXTURES TO MATCH SURROUNDING AREA(S).
3. FIELD VERIFY AND COORDINATE WITH ELECTRICAL & MECHANICAL SUB-CONTRACTORS FOR ADDITIONAL REPAIR WORK DUE TO NEW INSTALLATIONS.
4. FIELD VERIFY ALL DIMENSIONS BEFORE PRODUCTION/INSTALLATION.
5. WHILE DRAWINGS ATTEMPT TO INDICATE TOTAL DEMOLITION WORK BY SHORT DASHED LINES, THEY MAY NOT IDENTIFY EVERY ITEM TO BE REMOVED. THE CONTRACTOR SHALL BE RESPONSIBLE FOR REMOVAL OF ALL CONSTRUCTION REQUIRED FOR IMPROVEMENTS SHOWN IN ALL AREAS WHETHER SPECIFICALLY IDENTIFIED OR NOT.
6. SALVAGED ITEMS INDICATED FOR REUSE SHALL BE STORED FOR PROTECTION FROM DAMAGE AND THE ELEMENTS ON SITE AND IN A LOCATION SELECTED BY THE OWNER.
7. WHERE PARTITIONS, WALLS, AND OTHER FEATURES ARE INDICATED FOR REMOVAL OR PARTIAL DEMOLITION, AS INDICATED BY SHORT DASHED LINES, CONTRACTOR SHALL TAKE FULL PRECAUTIONS TO RETAIN AND PROTECT LOAD BEARING STRUCTURAL ELEMENTS. MAINTAIN STRUCTURAL INTEGRITY OF AFFECTED MEMBERS.

THE EXISTING WALL SHEATHING ON THE BUILDING CONSISTS OF ½" GYPSUM SHEATHING EVERYWHERE. AS PART OF THE SIDING REPLACEMENT PROJECT, THE EXTERIOR GYPSUM SHEATHING WILL BE REPLACED WITH NEW CDX SHEATHING (BRACED WALL PANEL) IN THE AREAS NOTED ON THE PLAN. NEW PRESCRIPTIVE POSITIVE CONNECTIONS (HOLDOWNS) WILL BE PROVIDED AT THE ENDS OF EACH NEW BRACED WALL SECTION. THIS WORK IS THE ONLY SCOPE OF A VOLUNTARY SEISMIC UPGRADE PER EBC 3403.3. ALL WALL SHEATHING UPGRADE WORK WILL OCCUR FROM THE EXTERIOR ONLY. NO NEW DIAPHRAGM SHEATHING, COLLECTORS, CHORDS OR CONNECTIONS ARE PROPOSED. THE WALL SHEATHING & HOLDOWN UPGRADE WORK IS VOLUNTARY AND PRESCRIPTIVE IN NATURE AND NOT DESIGNED TO MEET CURRENT SEISMIC CODE REQUIREMENTS.

3. STRUCTURAL DRAWINGS SHALL BE USED IN CONJUNCTION WITH ARCHITECTURAL AND ALL OTHER DISCIPLINES' DRAWINGS FOR BIDDING AND CONSTRUCTION. CONTRACTOR SHALL VERIFY DIMENSIONS AND CONDITIONS FOR COMPATIBILITY AND SHALL NOTIFY ARCHITECT OF ANY DISCREPANCIES PRIOR TO CONSTRUCTION.

   DISCREPANCIES: THE CONTRACTOR SHALL INFORM THE ENGINEER IN WRITING, DURING THE BIDDING PERIOD, OF ANY DISCREPANCIES OR OMISSIONS NOTED ON THE DRAWINGS OR IN THE SPECIFICATIONS OR OF ANY VARIATIONS NEEDED IN ORDER TO CONFORM TO CODES, RULES AND REGULATIONS. UPON RECEIPT OF SUCH INFORMATION, THE ENGINEER WILL SEND WRITTEN INSTRUCTIONS TO ALL CONCERNED. ANY SUCH DISCREPANCY, OMISSION, OR VARIATION NOT REPORTED SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR, AND WORK SHALL BE PERFORMED IN A MANNER AS DIRECTED BY THE ENGINEER.

    SHOP DRAWING SUBMITTALS PROCESSED BY THE ENGINEER OF RECORD ARE NOT CHANGE ORDERS. THE PURPOSE OF SHOP DRAWING SUBMITTALS BY THE CONTRACTOR IS TO DEMONSTRATE TO THE ENGINEER THAT THE CONTRACTOR UNDERSTANDS THE DESIGN CONCEPT. THE CONTRACTOR DEMONSTRATES THIS UNDERSTANDING BY INDICATING WHICH MATERIAL THEY INTEND TO FURNISH AND INSTALL AND BY DETAILING THE FABRICATION AND INSTALLATION METHODS THEY INTEND TO USE. IF DEVIATIONS, DISCREPANCIES, OR CONFLICTS BETWEEN SHOP DRAWING SUBMITTALS AND THE CONTRACT DOCUMENTS ARE DISCOVERED EITHER PRIOR TO OR AFTER SHOP DRAWING SUBMITTALS ARE PROCESSED BY THE ENGINEER, THE DESIGN DRAWINGS AND SPECIFICATIONS SHALL CONTROL AND SHALL BE FOLLOWED.

(11) PRESSURE TREATED MATERIAL CAN CAUSE EXCESSIVE CORROSION IN THE FASTENERS. PROVIDE HOT-DIPPED GALVANIZED (ELECTRO-PLATING IS NOT ACCEPTABLE) NAILS AND CONNECTOR PLATES (FRAMING ANGLES, ETC.) FOR ALL CONNECTORS IN CONTACT WITH PRESSURE TREATED FRAMING MEMBERS
(12) 7/16" APA RATED SHEATHING (OSB) MAY BE USED IN PLACE OF 15/32" SHEATHING PROVIDED THAT ALL STUDS ARE SPACED AT 16" O.C.
(14) AT ADJOINING PANEL EDGES, (2) 2X STUDS NAILED TOGETHER MAY BE USED IN PLACE OF A SINGLE 3X STUD. DOUBLE 2X STUDS MAY BE CONNECTED TOGETHER BY NAILING THE STUDS TOGETHER WITH 3" LONG NAILS OF THE SAME SPACING AND DIAMETER AS THE PLATE NAILING.
(15) CONTACT THE ENGINEER OF RECORD FOR ADHESIVE OR EXPANSION BOLT ALTERNATIVES TO CAST-IN-PLACE ANCHOR BOLTS. (SPECIAL INSPECTION MAY BE REQUIRED)
(16) MINIMUM NAIL LENGTH IS BASED ON REQUIRED PENETRATION INTO FRAMING MEMBER OF 1½"

NOTES:

SCOPE

- The site contains (14) 3-story existing wood buildings constructed in 1968. There are two building types: (9) 12-unit buildings and (5) 18-unit buildings. Each unit has a balcony or patio of approximately 60 SF.
- The project scope includes demolition of all existing balconies, patios, and exterior lap siding, and construction of new balconies, patios, and new siding over new exterior insulation rain-screen system.
- Seismic upgrades will voluntarily be applied to balconies and possibly voluntarily applied to the buildings. These seismic upgrades will result in design changes to the balconies.
- Existing mansard roof parapets above the balconies will be re-shingled.
- Each 12-unit building has approximately 720 SF of balconies and patios that will be replaced, and each 18-unit building has approximately 1,080 SF of balconies and patios that will be replaced.

PERMITTING QUESTIONS

ITEM	DISCUSSION
1	Please confirm whether we can submit permits for all 14 buildings at once. Construction is expected to be phased over 7 years (2 buildings per year), and each building will have its own permit. This will allow all permits to fall under the same code. • SC: Each building will have its own permit. Bellevue will not vest a future project under a current code. • Building permits are good for three years from the date of issuance. Work must start within one year of the permit being issued or it can expire. If the three-year life of the permit has expired, approval from the building official will be required for an extension. Otherwise, a new permit must be obtained.
2	Based on the definitions in the 2018 Bellevue Existing Building Code, we do not believe this project qualifies as a Substantial Improvement (the cost of construction will not exceed 50% of the market value of the structure before the improvement is started) or a Substantial Structural Alteration (the structural elements altered do not support more than 30% of the total floor and roof area). We plan to prescriptively demonstrate that the alterations being made comply with current applicable codes. Please confirm whether this is acceptable. • SC: Confirmed
3	Please confirm which 'Activity Type' applies to this scope of work. We think it could be 'Structure Addition – less than 1,000 SF' for the 12-unit buildings and 'Structure Addition – 1,000 SF to 3,999 SF for the 18-unit buildings. • SC: BW permit is for projects less than 1000 SF. • SC: BM permit is for projects 1000 SF and up. • Both of those assumptions are accurate.
4	Please confirm the general requirements for permit submittal and whether a survey is required. We plan to submit a site plan, elevations of the buildings, and plans, elevations, sections, and details for the balconies and mansard roof parapets. • SC: No survey is required. • SC: Building interiors do not need to be shown on permit plans; only the exterior wall in relation to the decks.
5	Please confirm if there are any other scopes of work required by Bellevue City Code (seismic upgrades, energy upgrades, etc.). • SC: Reference the energy code for existing building requirements.
6	Please confirm the expected review time. • SC: Expect a review time of 18 weeks for both permit types. • Reference this website for updated permit review times: https://bellevuewaprod.blob.core.windows.net/documentcenter/DSRecords/processing-day-by-permit-type.pdf
7	Miscellaneous • Project team will confirm that the project complies with RCW 64.65. KCHA sign Condo Sale Prohibition Covenant. 1 • CoB will adopt the 2021 Building Code when the State adopts it. This is expected to happen on 7/1/23. • At the time of permit submittal, SMR will ask which reviewer is assigned to the project. SMR will send these minutes to that person.

These minutes reflect our understanding of the items discussed during the meeting. Please notify Dee Knoff immediately if revisions are required. Concurrence with the minutes as published will otherwise be understood.

Hi Kim-

I reviewed this with our Building review supervisors and determined that proposed design revision meets the intent of IEBC 503.1. The balcony floors may be re-constructed as non-rated with condition that they are not less complying than the existing balcony construction prior to the alteration.

Let me know if you need additional clarification.

Best,
Julius

Hi Julius,

Please see attached the proposed sketch regarding the balconies.

IEBC 503.1 Except as provided by section 302.4, 302.5 or this sections, Alteration to any building or structure shall comply with the requirements of the IBC for new construction. Alterations shall be such that the existing building or structure is not less complying with the provisions of the IBC than the existing building or structure was prior to the alteration.

- Existing balconies do not appear to be rated. See diagram and photo attached.
- Existing balconies used wood columns and lack shear supports. See diagram and photo attached.
- The proposed alteration is not rated. It is not less complying with the provisions of the IBC than the existing building or structure prior to the alteration. In addition, the proposed alteration is providing steel beams and columns for shear supports at the balconies, which is an improvement. See sketch attached.
- Complies with IEBC 503.1

CC-ing Victor, our Structural Engineer in this email as well.

Best,
Kim

Kim,

Please send us a sketch of your proposed redesign regarding the balconies below so we can do a quick review. As discussed, IBC 705.2.3.1 requires balconies of combustible construction to be fire resistance rated by Table 601 unless one of the listed exceptions is met. Since the building is non-sprinklered, this would still require 1-hr rating for the balcony (type VA construction, non-sprinklered). You mentioned that the existing balconies are not rated and so the proposed alteration (if not rated) shall be such that it must be not less complying than the original condition (IEBC 503.1).

Hope this helps.

Julius

Hi Julius,

Circle back on our conversation regarding the balconies at Cascadian Apartments.

- We discussed with our Structural Engineer and the Owner's team about redesigning the balconies to have no exterior walls. As you mentioned, this allows for the balconies to be considered as Projections per IBC 705.2.2 -Projections, therefore do not required to be fire rated for 1-hr.
- The Owner team elected to go ahead with the redesign. All balconies will have steel columns and beams similar to a few small ones at Building P. We will aim to replace the corner 6x6's with HSS 4x4's and replace the shear wall with one more 4x4 (3 column frame). We will eliminate the privacy walls between unit balconies and propose a privacy screen product as you have recommended.

I want to check in with you and give you a heads up on our direction before we resubmit the Building Permit's responses. Please let us know if you have any questions.

I'll follow up with a phone call.

Best,
Kim

Hi Julius,
We are working with our consultants on items below, but we have an additional question regarding fire rating the columns.

At Building P, we have some small balconies that are supported by steel HSS tubes. My question is whether exterior steel columns would require protection?

I'll follow up with a call and discuss.

Best,
Kim

THE EXISTING WALL SHEATHING ON THE BUILDING CONSISTS OF ½" GYPSUM SHEATHING EVERYWHERE. AS PART OF THE SIDING REPLACEMENT PROJECT, THE EXTERIOR GYPSUM SHEATHING WILL BE REPLACED WITH NEW CDX SHEATHING (BRACED WALL PANEL) IN THE AREAS NOTED ON THE PLAN. NEW PRESCRIPTIVE POSITIVE CONNECTIONS (HOLDOWNS) WILL BE PROVIDED AT THE ENDS OF EACH NEW BRACED WALL SECTION. THIS WORK IS THE ONLY SCOPE OF A VOLUNTARY SEISMIC UPGRADE PER EBC 3403.3. ALL WALL SHEATHING UPGRADE WORK WILL OCCUR FROM THE EXTERIOR ONLY. NO NEW DIAPHRAGM SHEATHING, COLLECTORS, CHORDS OR CONNECTIONS ARE PROPOSED. THE WALL SHEATHING & HOLDOWN UPGRADE WORK IS VOLUNTARY AND PRESCRIPTIVE IN NATURE AND NOT DESIGNED TO MEET CURRENT SEISMIC CODE REQUIREMENTS.

3. STRUCTURAL DRAWINGS SHALL BE USED IN CONJUNCTION WITH ARCHITECTURAL AND ALL OTHER DISCIPLINES' DRAWINGS FOR BIDDING AND CONSTRUCTION. CONTRACTOR SHALL VERIFY DIMENSIONS AND CONDITIONS FOR COMPATIBILITY AND SHALL NOTIFY ARCHITECT OF ANY DISCREPANCIES PRIOR TO CONSTRUCTION.

   DISCREPANCIES: THE CONTRACTOR SHALL INFORM THE ENGINEER IN WRITING, DURING THE BIDDING PERIOD, OF ANY DISCREPANCIES OR OMISSIONS NOTED ON THE DRAWINGS OR IN THE SPECIFICATIONS OR OF ANY VARIATIONS NEEDED IN ORDER TO CONFORM TO CODES, RULES AND REGULATIONS. UPON RECEIPT OF SUCH INFORMATION, THE ENGINEER WILL SEND WRITTEN INSTRUCTIONS TO ALL CONCERNED. ANY SUCH DISCREPANCY, OMISSION, OR VARIATION NOT REPORTED SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR, AND WORK SHALL BE PERFORMED IN A MANNER AS DIRECTED BY THE ENGINEER.

    SHOP DRAWING SUBMITTALS PROCESSED BY THE ENGINEER OF RECORD ARE NOT CHANGE ORDERS. THE PURPOSE OF SHOP DRAWING SUBMITTALS BY THE CONTRACTOR IS TO DEMONSTRATE TO THE ENGINEER THAT THE CONTRACTOR UNDERSTANDS THE DESIGN CONCEPT. THE CONTRACTOR DEMONSTRATES THIS UNDERSTANDING BY INDICATING WHICH MATERIAL THEY INTEND TO FURNISH AND INSTALL AND BY DETAILING THE FABRICATION AND INSTALLATION METHODS THEY INTEND TO USE. IF DEVIATIONS, DISCREPANCIES, OR CONFLICTS BETWEEN SHOP DRAWING SUBMITTALS AND THE CONTRACT DOCUMENTS ARE DISCOVERED EITHER PRIOR TO OR AFTER SHOP DRAWING SUBMITTALS ARE PROCESSED BY THE ENGINEER, THE DESIGN DRAWINGS AND SPECIFICATIONS SHALL CONTROL AND SHALL BE FOLLOWED.

6.1 CLAIMS PROCEDURE

A. If the parties fail to reach agreement regarding any dispute arising from the Contract Documents, Contractor's only remedy shall be to file a Claim with Owner within 30 Days from Owner's final offer.

B. The Claim shall be deemed to cover all changes in cost and time (including direct, indirect, impact, and consequential) to which Contractor may be entitled. It shall be fully substantiated and documented.

C. After Contractor has submitted a fully-documented Claim, Owner shall respond, in writing, to Contractor with a decision within 30 Days from the date the Claim is received.

D. Contractor shall proceed with performance of the Work pending final resolution of any Claim. Owner's written decision as set forth above shall be final and conclusive as to all matters set forth in the Claim.

E. Any Claim of the Contractor against the Owner for damages, additional compensation, or additional time, shall be conclusively deemed to have been waived by the Contractor unless timely made in accordance with the requirements of this section.

6.2 ARBITRATION

A. If Contractor disagrees with Owner's decision rendered in accordance with paragraph 6.1C, Contractor shall provide Owner with a written demand for arbitration. No demand for arbitration of any such Claim shall be made later than 30 Days after the date of Owner's decision on such Claim; failure to demand arbitration within said 30 Day period shall result in Owner's decision being final and binding upon Contractor and its Subcontractors.

1. Notice of the demand for arbitration shall be filed with the American Arbitration Association (AAA), with a copy provided to Owner. The parties shall negotiate or mediate under the Voluntary Construction Mediation Rules of the AAA, or mutually acceptable service.

B. All Claims arising out of the Work shall be resolved by arbitration. The judgment upon the arbitration award may be entered, or review of the award may occur, in the superior court having jurisdiction thereof. No independent legal action relating to or arising from the Work shall be maintained.

6.3 CLAIMS AUDITS

A. All Claims filed against Owner shall be subject to audit at any time following the filing of the Claim. Failure of Contractor, or Subcontractors of any tier, to maintain and retain sufficient records to allow Owner to verify all or a portion of the Claim or to permit Owner access to the books and records of Contractor, or Subcontractors of any tier, shall constitute a waiver of the Claim and shall bar any recovery.

1. In support of Owner audit of any Claim, Contractor shall promptly make available to Owner all records relating to the Work.

PART 7 - TERMINATION OF THE WORK

7.1 TERMINATION BY OWNER FOR CAUSE

A. Owner may, upon a written Notice to Contractor and to its surety, terminate (without prejudice to any right or remedy of Owner) the Work, or any part of it, for cause upon the occurrence of any one or more of the following events:

1. Contractor fails to prosecute the Work or any portion thereof with sufficient diligence to ensure Completion of the Work within the Contract Time;
2. Contractor is adjudged bankrupt, makes a general assignment for the benefit of its creditors, or a receiver is appointed on account of its insolvency;

3. Contractor fails in a material way to replace or correct Work not in conformance with the Contract Documents;
4. Contractor repeatedly fails to supply skilled workers or proper materials or equipment;
5. Contractor repeatedly fails to make prompt payment due to Subcontractors, suppliers, or for labor;
6. Contractor materially disregards or fails to comply with laws, ordinances, rules, regulations, or orders of any public authority having jurisdiction; or
7. Contractor is otherwise in material breach of any provision of the Contract Documents.

B. Upon termination, Owner may at its option:

1. Take possession of the Project site and take possession of or use all materials, equipment, tools, and construction equipment and machinery thereon owned by Contractor to maintain the orderly progress of, and to finish, the Work;
2. Finish the Work by whatever other reasonable method it deems expedient.

C. Owner's rights and duties upon termination are subject to the prior rights and duties of the surety, if any, obligated under any bond provided in accordance with the Contract Documents.

D. When Owner terminates the Work in accordance with this section, Contractor shall take the actions set forth in paragraph 7.2B, and shall not be entitled to receive further payment until the Work is accepted.

E. If the unpaid balance of the Contract Sum exceeds the cost of finishing the Work, including compensation for A/E services and expenses made necessary thereby and any other extra costs or damages incurred by Owner in completing the Work, or as a result of Contractor's actions, such excess shall be paid to Contractor. If such costs exceed the unpaid balance, Contractor shall pay the difference to Owner. Contractor shall also be liable for liquidated damages until such reasonable time as may be required for Completion. These obligations for payment shall survive termination.

F. Termination of the Work in accordance with this section shall not relieve Contractor or its surety of any responsibilities for Work performed.

G. If Owner terminates Contractor for cause, and it is later determined that none of the circumstances set forth in 7.1A exist, then such termination shall be deemed a termination for convenience pursuant to 7.2.

7.2 TERMINATION BY OWNER FOR CONVENIENCE

A. Owner may, upon Notice, terminate (without prejudice to any right or remedy of Owner) the Work, or any part of it, for the convenience of Owner.

B. Unless Owner directs otherwise, after receipt of a Notice of termination for either cause or convenience, Contractor shall promptly:

1. Stop performing Work on the date and as specified in the notice of termination;
2. Place no further orders or subcontracts for materials, equipment, services or facilities, except as may be necessary for completion of such portion of the Work as is not terminated;
3. Cancel all orders and subcontracts, upon terms acceptable to Owner, to the extent that they relate to the performance of Work terminated;

PART 8 - MISCELLANEOUS PROVISIONS

8.1 RECORDS KEEPING AND REPORTING

A. The Contractor and all Subcontractors shall maintain accounts and records in accordance with State Auditor’s procedures, including personnel, property, financial and programmatic records which sufficiently and properly reflect all direct and indirect costs of any nature expended and services performed in the performance of this Contract and other such records as may be deemed necessary by the Owner to ensure proper accounting for all funds contributed by the Owner to the performance of this Contract and compliance with this Contract.

B. The Contractor, and its Subcontractors, shall maintain these records for a period of six (6) years after the date of Final Acceptance.

8.2 AUDITS AND INSPECTIONS

A. The records and documents with respect to all matters covered by this Contract shall be subject at all times to inspection, review or audit by the Owner or any other government agency so authorized by law during the performance of this Contract. The Owner shall have the right to an annual audit of the Contractor's financial statement and condition.

8.3 ORGANIZATION CONFLICTS OF INTEREST

A. The Contractor warrants that to the best of its knowledge and belief and except as otherwise disclosed, it does not have any organizational conflict of interest which is defined as a situation in which the nature of work under this Contract and the Contractor's organizational, financial, contractual or other interests are such that:

1. Award of the Contract may result in an unfair competitive advantage; or
2. The Contractor's objectivity in performing the Contract work may be impaired.

B. The Contractor agrees that if after award they discover an organizational conflict of interest with respect to this Contract, they shall make an immediate and full disclosure in writing to the Contracting Officer, which shall include a description of the action, which the Contractor has taken or intends to take to eliminate or neutralize the conflict. The Owner may, however, terminate the Contract if it deems the action to be in the best interest of the Owner.

C. In the event the Contractor was aware of an organizational conflict of interest before the award of this Contract and intentionally did not disclose the conflict to the Contracting Officer, the Owner may terminate the Contract for default.

D. The provisions of this Clause shall be included in all subcontracts and consulting agreements wherein the work to be performed is similar to the services provided by the Contractor. The Contractor shall include in such subcontracts and consulting agreements any necessary provisions to eliminate or neutralize conflicts of interest.

8.4 INTERESTS OF MEMBERS OF CONGRESS

A. No member of or delegate to the Congress of the United States of America shall be admitted to any share or part of this Contract or to any benefit to arise therefrom, but this provision shall not be construed to extend to this Contract if made with a corporation for its general benefit.

8.5 INTERESTS OF MEMBERS, OFFICERS, COMMISSIONERS AND EMPLOYEES, OR FORMER MEMBERS, OFFICERS AND EMPLOYEES

A. No member, officer, or employee of the King County Housing Authority, no member of the governing body of the locality in which the project is situated, no member of the governing body in which the Owner was activated, and no other public official or such locality or localities who exercises any functions or responsibilities with respect to the project, shall, during his or her tenure, or for one year thereafter, have any interest, direct or indirect, in this Contract or the proceeds thereof.

TABLE OF CONTENTS

1.0 SCOPE OF WORK

A Limited Good Faith Asbestos Inspection was conducted on building P & N of Cascadian Apartments located at 15517 NE 12th St, Bellevue, WA 98007 on May 9, 2023.

Tanveer Khan and Daniel Fyffe, AHERA Certified Building Inspectors, conducted this inspection at the request of Mr. Darrell Westlake of King County Housing Authority.

The purpose of this inspection was to identify asbestos containing building materials that would be impacted by the planned renovations. **As per client, these renovations are limited to the patio/balcony, exterior siding, and the roofs of building P & N only.**

Due to occupancy, destructive sampling methods were not utilized to collect samples of suspect building materials. No soft/limited demolition was performed during this inspection. Hidden materials may exist within the structures, and all suspect materials must be treated as asbestos containing until testing proves otherwise.

This inspection constitutes a survey of accessible suspect ACM in the project area and was conducted in accordance with:

The National Emission Standards for Hazardous Air Pollutants (NESHAP) 40 Code of Federal Regulations (CFR) Part 61, Subpart M requires a survey by an accredited asbestos inspector prior to demolition of a structure.

This asbestos survey also satisfies the requirements for "Good Faith" inspection outlined in Washington Administrative Code (WAC) 296-62-07721(2), *Communication of hazards*, which requires the owner of a structure to provide contractors with a written report identifying the asbestos-containing materials expected to be disturbed during renovation or demolition.

The asbestos survey section is written to comply with the AHERA asbestos sampling procedure as stated in 40 CFR 763.86. This protocol is required under the Puget Sound Clean Air Agency (PSCAA Regulation III, Article IV, rev. March 26, 2009) for all asbestos surveys prior to a building demolition or renovation.

A floor plan indicating locations of samples collected by NVL personnel has been included in **Appendix A**.

2.0 INSPECTION METHOD

Asbestos Inspection Method

The NVL Labs field inspector is an Asbestos Building Inspector, certified under the requirements of the United States Environmental Protection Agency (EPA) Asbestos Hazard Emergency Response Act (AHERA) regulation 40 CFR 763, Subpart E. A copy of his certificate is provided in Appendix C.

The AHERA Guidelines dictate the following:

The inspector must determine *homogeneous areas*, which are defined as an area of Thermal System Insulation, Surfacing Material, or Miscellaneous Material that is uniform in texture and color.

Once homogeneous areas have been determined, the inspector must determine whether or not material is friable or non-friable. ***Friable*** is defined as a material, that when dry, can be crushed, pulverized, or reduced to dust using hand pressure, and ***non-friable*** material is defined as a material, that when dry, *cannot* be crushed pulverized or reduced to dust using hand pressure. Materials normally defined as non-friable can become friable by definition if sufficiently damaged.

Once friability has been determined, the materials suspected of containing asbestos are divided into one of three categories: Thermal System Insulation (TSI), Surfacing Material (SM), or Miscellaneous Material (MM). Generally speaking, TSI and SM are considered to be friable, with the exception of TSI where the structural integrity of the insulation is intact and the protective out wrap is undamaged.

Once materials are divided into one of the categories, samples are collected in the following manner:

Friable Thermal System Insulation:

1. Inspector shall collect three (3) randomly distributed samples;

2. Inspector shall collect a minimum of one sample of each TSI materials that appears to have been used as a patch, as long as the patch is less than 6 linear feet / 6 square feet;

3. Inspector shall collect in a manner sufficient, samples from areas of TSI applied to fittings, tees, and joints.

Friable Surfacing Material:

1. Inspector shall collect samples in random manner of surfacing materials as follows:

    a. Collect three bulk samples from an area believed to be homogeneous (defined as a material that appears to be the same or similar and was installed at the same time) that is 1,000 square feet or less in size;

    b. Collect five bulk samples from an area believed to be homogeneous that is greater than 1,000 square feet in size, but less than 5,000 square feet in size;

    c. Collect seven bulk samples from an area believed to be homogeneous that is greater than 5,000 square feet.

2.0 INSPECTION METHOD (continued)

Miscellaneous Materials:

1. Inspector shall collect samples in a manner and number sufficient to determine if the material is asbestos-containing or not.

All Materials Determined to Be Non-Friable:

1. Inspector shall collect samples in a manner and number sufficient to determine if the material is asbestos containing or not.

In addition to these sampling requirements, the AHERA Building Inspector is required to assess the following of each material that is found to be positive for asbestos:

1. The condition of each material;
2. Accessibility;
3. Possibility for air erosion.

Once the samples have been collected, they must be analyzed by an accredited laboratory, and they must be analyzed using polarized light microscopy methods, commonly referred to as EPA Method 600/R-93/116.

NVL Labs collected samples and obtained analytical data for suspect asbestos-containing materials identified in the building. Once collected, each bulk sample was sealed in an unadulterated plastic bag to eliminate the possibility of cross-contamination. "Chain-of-Custody" tracking was followed to maintain sample integrity during handling and data reporting at NVL Labs.

A walk-through inspection of all accessible areas of the space was performed to identify suspect asbestos-containing materials. This inspection included a review of the internal and external aspects of this structure. The locations and types of potential asbestos-containing materials were noted.

Homogeneous Materials

Homogeneous materials are defined as an area of asbestos-containing material or presumed asbestos-containing material which appears similar throughout in terms of color, texture, and date of material application. The report listing for homogenous materials will appear as follows:

Sample Number	Material Description by Layer	Location	Asbestos	Quantity	Friable
#	Layer 1 is not asbestos-containing **Layer 2 is asbestos-containing**	**Location description**	1. % **2. %**	**"X" LF/ft²**	**Yes/No**

3.0 LABORATORY INFORMATION

Laboratory Analysis: Asbestos

In accordance with 40 CFR Chapter 1 (7-01-07 Edition) Part 763, Subpart E, Appendix E, asbestos samples are analyzed at NVL Labs using polarized light microscopy (PLM) with dispersion staining. If samples are not homogeneous, then sub-samples of the components are analyzed separately. All bulk samples are analyzed using EPA Method 600/R-93/116 with the following measurement uncertainties for reported % asbestos: 1%=0-3%, 5%≥1-9%, 10%=5-15%, 20%=10-30%, 50%=40-60%. Only materials containing more than 1% total asbestos were classified as "asbestos-containing" based on EPA, state, and local regulations.

Findings for samples containing more than one separable layer of materials are reported for each layer. The asbestos concentration in the sample is determined by visual estimation.

NVL Labs is accredited by the National Institute of Standards and Technology (NIST) under the National Volunteer Laboratory Accreditation Program (NVLAP) program for bulk asbestos fiber analysis; *NVLAP Lab Code 102063-0*

Any suspect material(s) not identified above should not be disturbed and should be tested immediately. All suspect materials must be treated as asbestos-containing until testing proves otherwise.

6.0 CONCLUSIONS AND RECOMMENDATIONS

There were **no** asbestos-containing building materials identified during the Limited Good Faith Asbestos Inspection of building P & N of Cascadian Apartments located at 15517 NE 12th St, Bellevue, WA 98007.

Contractors should be aware that concealed suspect asbestos-containing building materials may be uncovered during demolition or renovation work. Contractors should have contingency plans that include stopping work, evacuation of the immediate area and sampling by a certified AHERA Building Inspector whenever these materials are found. Concealed suspect materials may include, but are not limited to: non-fiberglass pipe or roof drain insulation; spray-applied coatings; cement board; asphalt or paper vapor barriers; floorings and adhesives.

If discovered, all asbestos-containing materials that will be disturbed as a natural part of renovation and/or demolition are required to be removed and disposed of in accordance with Washington State regulations. Washington State Department of Labor and Industries and PSCAA require that the abatement be performed using Certified Asbestos Workers under the direct on-site supervision by a Certified Asbestos Supervisor.

NVL recommends that an AHERA inspector/project manager be on site at the time of renovation/demolition to ensure that any potentially asbestos-containing materials uncovered during the process of renovation/demolition be dealt with properly.

6.0 CONCLUSIONS AND RECOMMENDATIONS (CONTINUED)

NVL Labs, Inc. is making the following recommendations regarding asbestos:

1. A copy of this inspection report should be maintained at the site during any renovations.

2. A copy of this inspection report should be provided to the General Contractor and any Sub

3. Contractors working on the renovation project.

4. A licensed asbestos abatement contractor must be utilized to remove any asbestos-containing materials that will be impacted by the planned demolition.

5. Abatement specifications should be prepared by a Hazardous Materials Consulting firm covering the regulated building materials that will be impacted by the renovations / demolition, and these specifications should be part of any contract documents prepared for this project.

6. A licensed asbestos abatement contractor must be utilized to remove any asbestos-containing materials that will be impacted by the planned renovation / demolition.

7. A Hazardous Materials Consulting Firm should provide project oversight and air monitoring during the removal of the asbestos-containing materials.

7.0 LIMITATIONS

The purpose of this Limited Good Faith Asbestos Inspection report is to document asbestos-containing materials discovered at "Cascadian Apartments" – 15517 NE 12th St, Bellevue, WA 98007.

The purpose of this inspection was to identify asbestos containing building materials that would be impacted by the planned renovations. **As per client, these renovations are limited to the patio/balcony, exterior siding, and the roofs of building P & N only.**

Due to occupancy, destructive sampling methods were not utilized to collect samples of suspect building materials. No soft/limited demolition was performed during this inspection. Hidden materials may exist within the structures, and all suspect materials must be treated as asbestos containing until testing proves otherwise.

This site visit consisted of a thorough visual walk-through of the building for the purpose of viewing and sampling potential asbestos-containing material. As hazardous material surveys are non-comprehensive by nature, NVL Laboratories, Inc. cannot be held liable for materials which require destructive means to access, materials which are hidden from sight (e.g. materials hidden behind walls), materials which cannot be found due to their obscure nature, or which otherwise cannot be discovered with reasonable diligence.

This document is the sole property of NVL Laboratories and the property owner, or his agent, authorizing this inspection.

RE: Bulk Asbestos Fiber Analysis; NVL Batch # 2307495.00

Client Project: 2023-0286
Location: "Cascadian Apartments" 15517 NE 12th St. Bellevue, WA 98007 (Bldg.P)

Dear Mr. Khan,

Enclosed please find test results for the 10 sample(s) submitted to our laboratory for analysis on 5/9/2023.

Examination of these samples was conducted for the presence of identifiable asbestos fibers using polarized light microscopy (PLM) with dispersion staining in accordance with **U. S. EPA 40 CFR Appendix E to Subpart E of Part 763**, Interim Method for the Determination of Asbestos in Bulk Insulation Samples and **EPA 600/R-93/116**, Method for the Determination of Asbestos in Bulk Building Materials.

For samples containing more than one separable layer of materials, the report will include findings for each layer (labeled Layer 1 and Layer 2, etc. for each individual layer). The asbestos concentration in the sample is determined by calibrated visual estimation.

For those samples with asbestos concentrations between 1 and 10 percent based on visual estimation, the EPA recommends a procedure known as point counting (NESHAPS, 40 CFR Part 61). Point counting is a statistically more accurate means of quantification for samples with low concentrations of asbestos.

The detection limit for the calibrated visual estimation is <1%, 400 point counts is 0.25% and 1000 point counts is 0.1%

Samples are archived for two weeks following analysis. Samples that are not retrieved by the client are discarded after two weeks.

Thank you for using our laboratory services. Please do not hesitate to call if there is anything further we can assist you with.

Dear Mr. Khan,
Enclosed please find test results for the 11 sample(s) submitted to our laboratory for analysis on 5/9/2023.

Examination of these samples was conducted for the presence of identifiable asbestos fibers using polarized light microscopy (PLM) with dispersion staining in accordance with **U. S. EPA 40 CFR Appendix E to Subpart E of Part 763**, Interim Method for the Determination of Asbestos in Bulk Insulation Samples and **EPA 600/R-93/116**, Method for the Determination of Asbestos in Bulk Building Materials.

For samples containing more than one separable layer of materials, the report will include findings for each layer (labeled Layer 1 and Layer 2, etc. for each individual layer). The asbestos concentration in the sample is determined by calibrated visual estimation.

For those samples with asbestos concentrations between 1 and 10 percent based on visual estimation, the EPA recommends a procedure known as point counting (NESHAPS, 40 CFR Part 61). Point counting is a statistically more accurate means of quantification for samples with low concentrations of asbestos.

Samples are archived for two weeks following analysis. Samples that are not retrieved by the client are discarded after two weeks.
